

## CONTENTS

<b>1.0 STATISTICAL BACKGROUND</b>	
1.1 Introduction.....	1.1
1.2 Some basic statistical concepts.....	1.1
Example 1.1 Coin-tossing	
1.3 The Central Limit Theorem.....	1.3
Example 1.2 Frequency distributions	
1.4 Simple linear regression.....	1.5
1.5 Multiple regression.....	1.12
1.6 Test for significant deviations from regression.....	1.13
1.7 Testing for curvilinearity without replications.....	1.15
1.8 Basic models for population growth.....	1.17
1.9 Testing for differences between regression lines.....	1.18
1.10 The analysis of covariance.....	1.22
1.11 ANOVA as a regression model.....	1.26
1.12 Stepwise regression.....	1.26
1.13 Logistic regression.....	1.27
Example 1.3 An Example of Logistic regression	
1.14 Locally weighted regression.....	1.31
1.15 Non-linear least-squares.....	1.32
1.16 Exercises (17).....	1.33
<b>2.0 INTRODUCTION TO BOOTSTRAPPING</b>	
2.1 Introduction.....	2.1
2.2 The mechanics of bootstrapping.....	2.2
2.3 Empirical probability distributions.....	2.3
Example 2.1 Calculations for survival time data set.	
2.4 Sample sizes for bootstrapping.....	2.7
2.5 Percentile confidence limits.....	2.7
2.6 Regression models and parametric bootstrapping.....	2.9
Example 2.2 Parametric regression bootstrapping	
Example 2.3 A regression estimate of survival rate	
Example 2.4 The correlation coefficient	
Exercises (8).....	2.17
<b>3.0 FURTHER TOPICS IN BOOTSTRAPPING</b>	
3.1 Introduction.....	3.1
3.2 Estimates of bias.....	3.1
Example 3.1 Bias of variance for normal distribution	
3.3 An improved bias estimate.....	3.2
3.4 Cross-validation.....	3.3
Example 3.2 Cross-validation error.	
3.5 Bootstrapping for predictions.....	3.5
3.6 Improved confidence intervals.....	3.6

3.7 The Jackknife.....	3.9
3.8 The Monte Carlo method.....	3.12
3.9 The delta method.....	3.14
Example 3.3 Application of bootstrapping to a complex function.	
Exercises (9).....	3.15
 4.0 SAMPLING METHODS	
4.1 Introduction.....	4.1
4.2 Simple random sampling.....	4.1
4.3 The finite population correction.....	4.2
4.4 Confidence intervals.....	4.2
Example 4.1 Calculating confidence limits	
4.5 Determining sample size.....	4.4
Example 4.2 Determining sample size	
4.6 Stratified random sampling.....	4.5
4.7 Mechanics of stratification.....	4.6
4.8 Estimates from a stratified sample.....	4.7
4.9 Confidence limits.....	4.8
Example 4.3 A caribou census	
Example 4.4 A mortality survey	
4.10 Allocating the sample to strata.....	4.12
Example 4.5 A deer population estimate	
4.11 Further remarks on stratified sampling.....	4.14
4.12 Ratio Estimation.....	4.15
4.13 Variance of ratio estimates.....	4.17
Example 4.6 ratio corrections for variable plot sizes	
4.14 Double sampling.....	4.19
4.15 Cluster sampling and subsampling.....	4.21
Example 4.7 A cluster sample example	
Example 4.8 Cluster sampling involving proportions	
4.16 Some additional sampling techniques.....	4.25
4.17 Exercises (8).....	4.26
 5.0 TRANSECT METHODS	
5.1 Introduction.....	5.1
5.2 A classification of transect methods.....	5.2
Example 5.1 Censusing prairie-dog dens	
Example 5.2 "Needle" sampling	
5.3 The line-intercept method.....	5.4
5.4 Length-biased sampling.....	5.11
Example 5.3 Auxiliary measurements	
5.5 Flushing-distance line transects.....	5.14
Example 5.4 Errors of measurement in line transects	
5.6 Right-angle distance line transects.....	5.17
Example 5.5 Testing flushing-angles	
5.7 Density Estimation.....	5.22

Example 5.6 Density estimation for line transects	
5.8 A "distribution-free" method.....	5.25
Example 5.7 The "Cox" method	
Example 5.8 Emlen's method	
5.9 Assumptions underlying line transect methods.....	5.30
5.10 Strip transects.....	5.31
5.11 Modified strip transects.....	5.33
5.12 Survey design.....	5.36
5.13 Exercises (8).....	5.39
<b>6.0 THE ANALYSIS OF VARIANCE</b>	
6.1 One-way analysis of variance.....	6.1
6.2 Two-way analysis of variance.....	6.5
6.3 Randomized blocks designs.....	6.6
6.4 Two-way analysis of variance with replication.....	6.7
6.5 Assumptions for the analysis of variance.....	6.10
6.6 Comparisons in ANOVA.....	6.14
6.7 Type I and II errors and "power".....	6.17
6.8 Other aspects of ANOVA.....	6.19
6.9 Exercises (14).....	6.20
<b>7.0 INTRODUCTION TO POPULATION ASSESSMENT</b>	
7.1 Viable populations.....	7.1
7.2 Methods for population assessment.....	7.3
7.3 Population estimation .....	7.6
7.4 Survival estimation.....	7.7
7.5 Reproductive rate estimation.....	7.9
7.6 Projection models.....	7.10
7.7 Some historical features of population analysis.....	7.11
7.8 A classification of methods for estimating abundance.....	7.12
<b>8.0 CAPTURE-RECAPTURE</b>	
8.1 Introduction.....	8.1
8.2 Petersen's method (Lincoln Index).....	8.2
Example 8.1 Petersen method	
8.3 The Schnabel method .....	8.6
Example 8.2 The Schnabel method	
Example 8.3 Estimation from frequency of capture	
Example 8.4 Mean Petersen method	
8.4 Methods for "open" populations.....	8.13
Example 8.5 The Jolly-Seber method	
8.5 The Manly-Parr method.....	8.20
8.6 Tests of assumptions.....	8.22
8.7 Exercises (9).....	8.23

## 9.0 INDICES OF ABUNDANCE

Introduction.....	9.1
Example 9.1 The pellet-group count	
Example 9.2 Conversion factors for pellet-counts	
Example 9.3 Roadside counts	
Example 9.4 A pocket-gopher index	
9.2 Trends in abundance.....	9.8
9.3 Testing significance of trend lines.....	9.10
9.4 Assessment of trend data.....	9.12
9.5 A test for significant deviations from regression using replicate points	9.14
9.6 A test for linearity based on the lowess method.....	9.17
9.7 Confidence limits from bootstrapping.....	9.18
9.8 Alternative estimates of rate of population change.....	9.20
Example 9.5 A census using ratio estimation	
9.9 Criteria for regression fits.....	9.24
9.10 Using auxiliary variables with trend data.....	9.28
Example 9.6 Trend indices with auxiliary variables	
Example 9.7 An alternative approach to index models	
9.11 Catch-effort methods.....	9.35
9.12 Models for catch-effort methods.....	9.36
Example 9.8 Calculations for catch-effort methods	
Example 9.9 Variable effort models	
Example 9.10 Catch-effort data on an "open" populations	
9.13 Catch-effort models with non-harvest losses.....	9.42
9.14 Sampling for indices.....	9.43
9.15 Transformations.....	9.44
9.16 Combining indices.....	9.46
9.17 Converting indices.....	9.48
9.18 Comments on the use of index data.....	9.49
9.19 Exercises(16).....	9.51

## 10.0 ESTIMATING SURVIVAL

10.1 Introduction.....	10.1
10.2 A single-recovery model.....	10.3
Example 10.1 Chapman-Robson survival estimate	
10.3 Further estimators.....	10.6
10.4 Analysis of incomplete data.....	10.7
Example 10.2 Analysis of incomplete data	
10.5 Testing assumptions.....	10.8
Example 10.3 Testing compatibility of first recoveries	
Example 10.4 Combining years	
10.6 Life tables.....	10.11
10.7 Catch-curves and kill-curves.....	10.14
10.8 Combining estimates from several years.....	10.15
Example 10.5 An example of Haldane's method	
10.9 Regression methods.....	10.17

10.10 Effect of changes in survival.....	10.19
10.11 Use of telemetry to estimate survival.....	10.21
10.12 Kaplan-Meier estimates of survival.....	10.22
10.13 More complex methods for analysis of survival data.....	10.25
10.14 Exercises (7).....	10.26
<b>11.0 THE LOTKA-LESLIE MODEL</b>	
11.1 Introduction.....	11.1
11.2 Discrete and continuous population growth.....	11.1
11.3 Lotka's equation and the Leslie matrix model.....	11.4
11.4 The stable age structure.....	11.5
11.5 Augmented life tables.....	11.6
11.6 An augmented life table.....	11.6
11.7 Reproductive and survival curves.....	11.7
11.8 Some useful approximations.....	11.10
11.9 Approximate variance of lambda.....	11.12
11.10 Examples of bootstrapping .....	11.15
11.11 Delta method examples.....	11.20
11.12 Comparisons with direct estimates of lambda.....	11.20
11.13 Development of stable age-structure.....	11.21
11.14 Lotka's equations .....	11.23
11.15 Net rate of increase.....	11.26
11.16 Practical applications.....	11.27
11.17 Exercises (9).....	11.29
<b>12.0 POPULATION MODELS</b>	
12.1 Introduction.....	12.1
12.2 Curve-fitting models.....	12.2
12.3 Some growth curves.....	12.5
12.4 Projection models.....	12.10
12.5 Predator-prey models.....	12.12
12.6 A wolf-ungulate model.....	12.16
12.7 Exercises (7).....	12.18
<b>13.0 DEALING WITH DENSITY DEPENDENCE</b>	
13.1 Introduction.....	13.1
13.2 Some historical aspects.....	13.3
13.3 Testing for density-dependence.....	13.4
13.4 Population regulation.....	13.11
13.5 Testing for a maximum productivity level.....	13.12
13.6 Components of density dependent responses.....	13.13
13.7 Exercises (7).....	13.19
<b>14.0 SOME CASE HISTORIES</b>	
14.1 Introduction.....	14.1

14.2 The Florida manatee.....	14.1
14.2 The Pacific walrus.....	14.2
14.3 Bowhead whales.....	14.3
14.4 Grizzly bears.....	14.4
14.5 Hawaiian monk seals.....	14.6
14.6 The Madison-Firehole elk herd.....	14.8
14.7 Isle Royal wolves and moose.....	14.12
